Sustainability In Coffee Production: Creating Shared Value

Sustainability in Coffee Production - Andrea Biswas-Tortajada 2015-06-12 Coffee, as a commodity and through its global value chains, is the focus of much interest to achieve fair trade and equitable outcomes for producers, processors and consumers. It has iconic cultural and economic significance for Colombia, which is one of the world's major coffee producers for the global market. This book examines sustainable coffee production in Colombia, specifically the initiatives of Nestlé to create shared value. It describes the transformation of the coffee landscape by the development of economically, socially and environmentally viable and dedicated supply chains. Suppliers have been encouraged to shift production and quality paradigms, in order to develop long-term and sustainable strategies for higher value and premium quality products. This has been partially achieved by establishing a robust partnership with the Coffee Growers Federation and other public, private and social actors, thereby taking control of the institutional architecture and knowledge base that exists in the country. The book provides an important lesson of corporate social responsibility and the creation of shared value for the benefit of farmers, corporations and consumers.

Creating Sustainable Work Systems - Peter Docherty 2010-06-30 The first edition of this book was published, the subject of sustainability has risen to the forefront of thinking in almost every subject within business and management. Tackling the latest developments and integrating practical perspectives with rigorous research, this new edition sheds light on a vital aspect of working life. Current trends reveal that increasing intensity at work has major consequences at individual, organizational and societal levels. Sustainability in work systems thus requires a multi-stakeholder approach, emphasizing a value-based choice to promote the concurrent development of various resources in the work system. This sustainability grows from intertwined processes that take place within and between organizations in collaboration. In exploring the development of sustainable work systems, this book analyzes these problems, and provides the basis for designing and implementing 'sustainable work systems' based on the idea of regeneration and the development of human and social resources. The authors, who are leading researchers and practitioners from around the world, consider the existing possibilities and emerging solutions and explore alternatives to intensive work systems.

The State of Sustainable Coffee - Daniele Giovanniacci 2003

Brewing Justice - Daniel Jaffee 2014-09-12 Fair trade is a fast-growing alternative market intended to bring better prices and greater social justice to small farmers around the world. But what does a fair-trade label signify? This vivid study of coffee farmers in Mexico offers the first thorough investigation of the social, economic, and environmental benefits of fair trade. Based on extensive research in Zapotec indigenous communities in Oaxaca, Brewing Justice follows the members of the cooperative Michiza, whose organic coffee is sold on the international fair-trade market, and compares them to conventional farming families in the same region. The book carries readers into the lives of coffee producer households and communities, offering a nuanced analysis of how fair-trade’s effects on everyday life and the limits of its impact. Brewing Justice paints a clear picture of the dynamics of the fair-trade market and its relationship to the global economy. Drawing on interviews with dozens of fair-trade leaders, the book also explores the movement’s fraught politics, especially the challenges posed by rapid growth and the increased role of transnational corporations. It concludes with recommendations to strengthen and protect the integrity of fair trade.

Creating Sustainable Urban Futures - Niki Frantzeskaki 2018-01-09 This is a unique book that provides rich knowledge on how to understand and actively contribute to urban sustainability transitions. The book combines theoretical frameworks and tools with practical experiences on transition management as a framework that supports urban planning and governance towards sustainability. The book offers the opportunity to become actively engaged in working towards sustainable futures of cities. Readers of this book will be equipped to understand the complexity of urban sustainability transitions and diagnose persistent unsustainability problems in cities. Urban planners and professionals will build competences for designing transition management processes in cities and engaging with multidisciplinary knowledge in solution-seeking processes. The heart of the book marks the variety of very different local case studies across the world - including, amongst others, Rotterdam in the Netherlands, La Botija in Honduras, Sydney in Australia and Cleveland in the US. These rich studies give inspiration and practical insights to young planners on how to create sustainable urban futures in collaboration with other stakeholders. The case studies and critical reflections on applications of transition management in cities offer food for thought and welcome criticism. They also introduce new lenses to understand the bigger picture that co-creation dynamics play in terms of power, identity, legitimacy and challenging actor roles. This will equip the readers with a deep understanding of the dynamics, opportunities and challenges present in urban contexts and urban sustainability transitions.

The Craft and Science of Coffee - Brittia Folmer 2016-12-16 The Craft and Science of Coffee follows the coffee plant from its origins in East Africa to its current role as a global product that influences millions of lives though sustainable development, economics, and consumer desire. For most, coffee is a beloved beverage. However, for some it is also an object of scientific study, and for others it is approached as a craft, both building on skills and experience. By combining the research and insights of the scientific community and expertise of the crafts people, this unique book brings readers into a sustained and inclusive conversation, one where academic and industrial thought leaders, coffee farmers, and baristas are quoted, each informing and enriching each other. This unusual approach guides the reader on a journey from coffee farmer to roaster, market analyst to barista, in a style that is both rigorous and experience based, universally relevant and personally engaging. From farm processes to consumer benefits, the reader is given a deeper appreciation and understanding of coffee's complexity and is invited to form their own educated opinions on the ever changing situation, including potential routes to further shape the coffee future in a responsible manner. Presents a novel synthesis of coffee research and real-world experience that aids understanding, appreciation, and potential action. Includes contributions from a multitude of experts who address complex subjects with a conversational approach. Provides expert discourse on the coffee value chain, from agricultural and production practices, sustainability, post-harvest processing, and quality aspects to the economic analysis of the consumer value proposition. Engages with the key challenges of coffee production and potential solutions.

The Università del Caffè Brazil was born in March of 2000 as a result of a partnership between PENSA (Agribusiness Knowledge Center - FEA/USP and FIA) and illycaffè. The mission, since the beginning, has been to generate and disseminate knowledge of the coffee system to the world. To celebrate its 15 years of activity the UdC Brasil team, in close harmony with illycaffè, has conducted coffee courses to growers and technicians covering technical and managerial subjects. There were more than 9 thousand participations in seminars, courses and five editions of Specialization Course in the Coffee Agribusiness. In tune with the needs of managers and coffee growers and illycaffè, since 2014 the UdC Brasil courses are held at a distance through the portal universidadesdocafe. Aligned with its mission, the University of Caffè Brazil generates knowledge through the production of research. This book intends to support the dissemination of the knowledge to the community of the coffee business, adding value to all its participants.

Confronting the Coffee Crisis
Christopher M. Bacon 2008
Our morning cups of coffee connect us to a global industry and an export crisis in the tropics that is destroying livelihoods, undermining the cohesion of families and communities, and threatening ecosystems. Confronting the Coffee Crisis explores small-scale farming, the political economy of the global coffee industry, and initiatives that claim to promote more sustainable rural development in coffee-producing communities. Contributors review the historical, political, economic, and agroecological processes within today's coffee industry and analyze the severely depressed export market that faces small-scale growers in Mexico and Central America. The book presents a series of interdisciplinary, empirically rich case studies showing how small-scale farmers manage ecosystems and organize cooperatively as they seek useful collaborations with international NGOs and coffee companies to create opportunities for themselves in the coffee market. The findings demonstrate the interconnections among farmer livelihoods, biodiversity, conservation, and changing coffee markets.

Using a Positive Lens to Explore Social Change and Organizations
Karen Golden-Biddle 2012-08-21
How can we apply a positive lens to explore social change organizations and elaborate theory and practice? This is the core question that inspired this book. It is a question that brought together a diverse and talented group of researchers interested in change and organizations in different problem domains (sustainability, healthcare, and poverty alleviation). The contributors to this book bring different theoretical lenses to the question of how social change organizations and some are anchored in macro accounts of how and why social change processes occur, while others approach the question from a more psychological or social psychological perspective. Many of the chapters in the book travel across levels of analyses, making their accounts of change good examples of multi-level theorizing. Some scholars are practiced and immersed in thinking about organizational phenomena through a positive lens, for others it was a total adventure in trying on a new set of glasses. However, connecting all contributing authors was an excitement and willingness to explore new insights and new angles on how to explain and cultivate social change within or across organizations. This edited volume will be of interest to an international community who seek to understand how organizations and people can generate positive outcomes for society. Students and researchers in organizational behavior, management, positive psychology, leadership and corporate responsibility will find this book of interest.

The Trillion Dollar Shift
Margot Hook 2018-01-12
Winner of the Gold Axiom Business Book Award 2019 in the Philanthropy / Non Profit / Sustainability category. Over the past 30 years, the world has seen great social improvements. Technology has been developing at an enormous pace and is helping us see our more pressing social and environmental challenges. Yet, despite this success, our current model of development is still deeply problematic. Natural disasters triggered by climate change have doubled since the 1980s, violence and armed conflict now cost more than 13 percent of GDP, social inequality and youth unemployment is worsening around the world, and climate change threatens the global population with tremendous environmental as well as social problems. Using the United Nations Sustainable Development Goals as a framework, this book sets out how business and capital now have a real opportunity to help resolve these problems. With clear and plentiful examples and cases of how businesses are making a difference and figures to support the cases, and inspiring and instructional information on how businesses can create sustainable value, this highly readable book is a must-read for businesses (large and small) that want to make a difference, relevant facts and figures to support the cases, and inspiring and instructional information on how businesses can create sustainable value.

Creating Shared Value
James E. Anderson 2014-02-10
Creating Shared Value identifies a new dynamic of innovation, which is now evident in the world economy, and shows how to leverage it in ways that benefit both business and society. This concept of shared value can help business and society address some of the greatest challenges of the 21st century and thereby add value to all its participants.
partnerships between businesses and nonprofits. The book is a step-by-step guide for business managers and non-profit practitioners for achieving successful cross-sector partnerships. It examines the key dimensions of the Collaborative Mindset that shape each partner’s collaborative efforts. It analyzes the drivers of partnership evolution along the Collaboration Continuum, and sets forth the key pathways in the Collaboration Process Value Chain. The book concludes by offering Twelve Smart Practices of Collaborative Value Creation for the design and management of cross-sector partnerships. The book will empower organizations to strategically increase the potential for value creation both for the partners and society. Praise for Creating Value in Nonprofit-Business Collaborations: New Thinking & Practice! “This is a playbook for enabling business and nonprofits to co-create shared value. These new types of collaborations about creating value, rather than the tense standoff of the past, are part of the way we will create actual solutions to society’s challenges.” Michael J. Porter, Bishop William Lawrence University Professor, Harvard Business School “Co-creating value is a powerful concept Jim Austin and May Szeteinardi are sharing with us that will bring business and non-profit leaders to a new level of understanding and performance. This new book is the indispensable guidebook for leaders of the future.” Francis Hesselbein, Founding President and CEO of the Frances Hesselbein Leadership Institute, Former CEO of the Girl Scouts of America, and Holder of Presidential Medal of Freedom “I love the book! While it focuses on ‘cross sector’ collaboration, it should be read by every executive in the ‘for-profit’ sector. Business is about how to collaborate with stakeholders to create value. This book tells you how to do it. Bravo!” R. Edward Freeman, University Professor and Olsson Professor The Darden School University of Virginia “Finally a book that demystifies what is probably the single most indispensable strategy for advancing social change: cross-sector collaboration that creates genuine, measurable value for all.” This book is an original and valuable resource for both the nonprofit and business sectors, providing a promising new roadmap that shows how to go beyond fighting for one’s share of the pie, to collaboration that actually makes the pie grow.” Billy Shore, Founder and CEO of Share Our Strenght and Chairman of Community Wealth Ventures “Professors Austin and Szeteinardi provide essential guidance for managers determining how to produce benefits for their organizations and high impact for society. This is an informed, thoughtful, and practical analysis.” Rosabeth Moss Kanter, Ernest L. Arbuckle Professor of Business Administration, Harvard Business School and author of SuperCorp: How Vanguard Companies Create Innovation, Profits, Growth and Social Good

Private Data and Public Value-Holly Jarman 2016-02-26 This book investigates the ways in which these systems can promote public value by encouraging the disclosure and reuse of privately-held data in ways that support collective values such as environmental sustainability. Supported by funding from the National Science Foundation, the authors’ research team has been working on one such system, designed to enhance consumers ability to access information about the sustainability of the products that they buy and the supply chains that produce them. Pulled by rapidly developing technology and pushed by budget cuts, politicians and public managers are attempting to find ways to increase the public value of their actions. Policymakers are increasingly acknowledging the potential that lies in publicly disclosing more of the data that they hold, as well as incentivizing individuals and organizations to access, use, and combine it in new ways. Due to technological advances which include smarter phones, better ways to track objects and people as they travel, and more efficient data processing, it is now possible to build systems which use shared, transparent data in creative ways. The book adds to the current conversation among academics and practitioners about how to promote public value through data disclosure, focusing particularly on the roles that governments, businesses and non-profit actors can play in this process, making it of interest to both scholars and policy-makers.

Berkshire Encyclopedia of Sustainability 8/10-Ray C. Anderson 2012-11-01 The Americas and Oceania: Assessing Sustainability provides extensive coverage of sustainability practices in two regions linked culturally and historically by their relative isolation before the Columbian exchange, by their colonization after it, and by the challenges of pollution, resource overuse, and environmental degradation. Regional experts and international scholars focus on environmental history in areas such as the South Pacific islands, now particularly threatened by rising ocean levels due to climate change, and on countries whose governments and corporations can play a major role in promoting or discouraging sustainable changes. Brazil, an emergent power on the world stage; the United States, the world’s third most populous nation; and New Zealand, seemingly on its way to becoming an enviable model of sustainable development.

Managing Sustainable Business-Gilbert G. Lenssen 2018-03-07 This book offers 32 texts and case studies from across a wide range of business sectors around a managerial framework for Sustainable Business. The case studies are developed for and tested in executive education programmes at leading business schools. The book is based on the premise that the key for managing the sustainable business is finding the right balance over time between managing competitiveness and profitability AND managing the context of the business with its political, social and ecological risks and opportunities. In that way, a sustainable business is highly responsive to the demands and challenges from both markets and societies and managers embrace the complexity, ambivalence and uncertainty that goes along with this approach. The book presents a framework that facilitates the adoption of best business practices. This framework leads executives through a systematic approach of strategic analysis and business planning in risk management, issues management, stakeholder management, sustainable business development and strategic differentiation, business model innovation and developing dynamic capabilities. The approach helps broaden the understanding of what sustainable performance means, by promoting business value against sustainability risks and creating business value from sustainability opportunities.

Transdisciplinarity For Sustainability-Martina M. Keitsch 2020-11-24 This volume explores interactions between academia and different societal stakeholders with a focus on sustainability and the SDGs. Traditionally, academia has focused on research and education. More recently, however, the challenges of sustainable development and achieving the SDGs have required the co-production of knowledge between academic and non-academic actors. Compromisingly, the World Bank reports that only 0.9% of all research expenditures worldwide are spent on research on sustainability. This book offers an overview of the transdisciplinary approach to sustainability research and the implementation of sustainability-related practices in academia and beyond.

Ethics And International Marketing-Marilyn Carrigan 2005

Coffee Consumption and Industry Strategies in Brazil-Luciana Florêncio de Almeida 2019-09-13 Coffee Consumption and Industry Strategies in Brazil, the latest release in the Consumer Science and Strategic Marketing series, provides an overview of the coffee sector, focusing on marketing strategies, consumer behavior, and strategies for transforming coffee consumption, production and retailing. The book presents the importance of an academic-practitioner perspective to bridge the gap between scholars and managers, and between business schools and the entrepreneurial world. Authors and co-authors from a broad span of transdisciplinary collaboration, Transdisciplinarity For Sustainability: Aligning Diverse Practices is written by specialists from various academic disciplines and represents an important step forward in systems-thinking of knowledge and understanding of transdisciplinary collaboration. They are designed to provide a roadmap for further research in the field and facilitate pursuing and realizing the SDGs. This book will appeal to researchers and postgraduate students in a variety of disciplines such as architecture, design, economics, social sciences, engineering and sustainability studies. It will also be of significant value to professionals who are engaged in transdisciplinary collaboration that supports sustainable development.

Linking Local and Global Sustainability-Sukhbir Sandhu 2014-09-10 The book takes a holistic approach to sustainability. Acknowledging the Brundtland definition, that sustainable development meets the needs of the present without compromising the ability of future generations to meet their own needs, the book is specifically concerned with the ethics of contemporary business and environmental sustainability activity and thinking. It is concerned with the role of institutions—both local and global in achieving sustainability initiatives. All twelve chapters expand sustainability-conceptually, empirically and theoretically, and in doing so provide insights into linking local and global sustainability. The book refocuses sustainability as a series of intertwined and dynamic relationships, backed by just ethical decision-making, which begin locally, and reach out to impact the global level.

The Palgrave Handbook of Sustainability- Robert Brinkmann 2018-04-30 This book provides a comprehensive overview of the practice of sustainability through a diverse range of case studies spanning across varied fields and areas of expertise. It provides a clear indication as to the contemporary state of sustainability in a time faced by issues such as global climate change, challenges of environmental justice, economic globalization and environmental contamination. The Palgrave Handbook explores three broad themes: Environmental Sustainability, Social Sustainability and Economic Sustainability. The authors critically explore these themes and provide insight into their linkages with one another to demonstrate the substantial efforts currently underway to address the sustainability of our planet. This handbook is an important contribution to the best practices on sustainability, drawn from many different examples across the fields of engineering, geology, anthropology, sociology, biology, chemistry and religion.
Producer organisations and market chains—Giel Ton 2007-10-09 The role of producer organizations in market chains has received increasing attention in recent years, both from governments and donors. In order to lower transaction costs, markets demand that smallholder farmers operate in an organized manner. The contribution analyzes the nature of smallholder market access and explores the strategies adopted by companies in recent years, both from governments and donors. In order to lower transaction costs, markets demand that smallholder farmers operate in an organized manner. However, though the policy openings for support seem promising, smallholder market access through farmer-led economic organisations is not easy. This book presents various approaches to support producer organisations in providing economic services to their members, with a focus on developing countries. Markets are increasingly fragmented in value chains that link farmers with specific processors, retailers and consumer segments. Several contributions in this book analyse these dynamics in specific value chains, such as the fair trade and organic agriculture and their potential to provide market outlets for smallholder farmers.

The concluding contributions in this book are organized in three sections—organizational support for producer organisations; value chain development with producer organisations; changes in the institutional environment for producer organisations. This book is the result of a Dutch partnership between policy makers, researchers and practitioners designed to confront ideas with realities. Organized in a platform called AgriProFocus, members aim to provide more and better support to producer organisations in the South. Through so-called expert meetings, staff from donor organisations and knowledge centres, government officials, and business representatives, share their experiences and lessons learned. The experiences presented in this book are not recipes for instant success, but instead, highlight that support processes are often more fragile and slower moving than policy makers realise. This book is essential reading for scholars, practitioners and researchers interested in supporting and facilitating trajectories of change led by producer organisations in developing countries.

Creating Ecological Value—Frank Boons 2009-01-01 Creating Ecological Value is a timely contribution that matches recent trends in innovation economics suggesting that an evolutionary notion of system innovations and a sector-specific industrial dynamics perspective are a suitable analytical framework for the way in which firms address sustainability challenges through innovation. Marcus Wagner, University of Würzburg, Germany We cannot expect to solve the environmental problems we face today by narrowing our focus on single firms. We need to think more systemically. In his book, Creating Ecological Value, Frank Boons takes on this challenge. While his research begins by exploring the diversity of environmental strategies adopted by companies, he moves his analysis next to the level of the production and consumption systems to understand how these strategies shape and alter them. His work considers how the diffusion of strategies and novel approaches can be facilitated but also finds that the systems into which these strategies are imposed are resilient and, at times, resistant to change. He offers plenty of ideas to ponder as we consider how the market system as a whole addresses environmental issues. Andrew J. Hoffman, The University of Michigan, US Humans as scientists and managers often draw on metaphors to help describe and understand the complex issues they observe or manage. As human activities begin to bump up against the constraints set by natural systems there is a tendency to search for metaphors from the understanding of natural science incomeliness or industrial ecology have been around for some time now. In this book, Frank Boons explores the power of ideas from natural science as metaphor to understand economic systems. This is a complex work, but he does it with skill; remembering that a metaphor is powerful not just in what it explains but even more in what it doesn’t serve to explain. Nigel Roome, Free University of Brussels, Belgium and TianNinas Business School, Beijing Sustainability is a holistic notion, a firm in its meaning of innovative products with reduced environmental impact to lobbying against governmental attempts to set standards for the way in which firms deal with the natural environment. This book explores this variety and is the first to provide a coherent evolutionary approach to the ecological strategies of firms. Drawing on insights from organization and management, science and innovation studies, the authors outline an evolutionary framework enabling a deeper understanding of how firms shape ecological strategies and interact to create inertia or change at the level of systems of production and consumption. This framework is applied to the coffee and automobile production and consumption systems, yielding insight into the complex dynamics through which such systems evolve in dealing with ecological impact. The book advances theoretical insight into business strategies and the natural environment and illuminates the dynamics of production and consumption systems. Scholars, students and practitioners from organization and management studies, innovation studies and industrial ecology interested in the relationship between business and the natural environment will find this book invaluable.

Working with Stakeholder Dialogues—Petra Kuenkel 2011-04-07 Working towards a more sustainable world requires bringing together differing world-views and balancing conflicts of interests for responsible business, people-oriented public service and a strong civil society. Stakeholder Dialogues are a methodology for the design and implementation of consultation and cooperation processes that are built on the inclusion and integration of different interest groups. Such a collaborative approach requires new competencies for globally and locally responsible leaders. It calls for conscious leadership in integrating differences in cultures, interests and goals. With a well-structured approach Stakeholder Dialogues lead to practical outcomes that could not have been achieved otherwise and that can be implemented more easily because all stakeholders involved experience a higher degree of ownership. High-quality Stakeholder Dialogues create a climate of trust, commitment and collective intelligence. Based on the Collective Leadership Institute’s 5 years of experience in process support and capacity building, the practical guide Working with Stakeholder Dialogues supports you in planning, implementing and evaluating successful and result-oriented consultation and cooperation between different stakeholders.

Sustainable Production Consumption Systems—Louis Lebel 2009-12-02 Sustainable Production Consumption Systems brings together a set of designed case studies intended to provide a more in-depth understanding of challenges and opportunities in bringing knowledge and action closer together for the sustainable management of production and consumption processes. Such production systems and consumption processes must be understood for the need to engage in the dialogue of the actors involved in the production, consumption or regulation of specific goods or services and other stakeholders affected by those processes. Such engagement was particularly worthwhile when it helped mobilize actors to pursue linking knowledge with action in ways that improve the prospects for sustainability.

CSR and Socially Responsible Investing Strategies in Transitioning and Emerging Economies—Kuna-Marzǎ/ek, Anetta 2020-01-17 One of the most important activities of enterprises today is responsible entrepreneurship. Corporate social responsibility (CSR) activities can help to forge a stronger bond between employees and companies, boost morale, and help both employees and employers feel more connected with the world around them. Moreover, the growing relevance of this concept results from the fact that it is perceived as an effective tool for increasing competitiveness, improving the image of the company, or contributing to the generation of higher profits. In today’s world, an active commitment to social responsibility is becoming more common for a company. CSR and Socially Responsible Investing Strategies in Transitioning and Emerging Economies is an essential resource source that identifies the scale and scope of implementation of CSR and socially responsible investing strategies and standards in companies operating in different transitioning and emerging economies as well as assessing the global effects of those activities. Featuring research on topics such as economic growth, responsible investing, and business ethics, this book is ideally designed for managers, executives, directors, corporate professionals, government officials, industry leaders, academician, students, and researchers in the fields of international economics, international business, marketing, finance management, and public relations.

Leading Transformative Change Collectively—Petra Kuenkel 2020-11-09 This book directly helps decision-makers and change agents in companies, NGOs, and government bodies become more proficient in transformative, collaborative change in realizing the SDGs. This practitioner’s handbook translates a systemic—and enlivening—approach to collaboration into day-to-day work and management. It connects the emerging practice of multi-stakeholder collaboration to easily understandable models, tools, and cases. Numerous, concrete cases not only bring this methodology to life, but also help identify the challenges and avoid common mistakes. The book can be used as a guide to apply a breakthrough approach for navigating the complexity of stakeholder systems, designing results-oriented process architectures, ensuring the success of cross-sector change initiatives, and enlivening collaboration ecosystems for SDG implementation. It is designed to enhance high-stake collaboration engagement, dialogue, and cooperation. A must-read, the book sets a new standard for collaborative implementation of Agenda 2030 and is a foundational guide for leading sustainability transformations collectively to achieve climate change mitigation, social integration, equitable value chains, and broad sustainability challenges.

The Global Governance of Food—Sara Ram 2013-09-13 Food provides a particularly exciting and grounded research site for understanding the mechanisms governing global transactions in the 21st century. While food is intimately and fundamentally related to ecological and human well-being, food products now travel far flung trade routes to reach us. International trade in food has tripled in value since 1960 and the trading production, movement, transformation, and consumption of food necessitates research that situates localities within global networks and facilitates our capacity to "see the tree and the forest" by zooming from the global to the local and back to the global. Our need for food is a constant, how we acquire food is a variable, and the production, commercialization, and consumption of food therefore offer an invaluable window on the globalization of the world we inhabit. Food provides an ideal site for answering the fundamental questions of governance of central concern to globalization debates. This book presents recent and interdisciplinary scholarship about the variety of mechanisms governing global food systems and their impacts on human and environmental well-being. This book was previously published as a special issue of Globalizations.

International Trade Outlook for Latin America and the Caribbean 2019—Economic Commission for Latin America and the Caribbean 2020-02-18 The global trade performance in 2018 was the worst since the international financial crisis. This edition of International Trade Outlook for Latin America and the Caribbean analyses that performance, as well as the mounting trade tensions and their repercussions for the region’s own trade. The heavy slowdown in global trade is the result of the build-up of trade barriers since 2015, as well as longer-standing factors, including weaker global growth, risks associated with protectionism and geopolitical tensions. The share ofLatin America’s tradeflows in their total share of global trade is expected to decline, and the impactthe very nature of trade. Chapter II analyses how international trade could contribute more to environmental sustainability. Trade has both positive and negative impacts on the environment and the net balance of that effect is uncertain. The links between trade and the environment have become more visible since the 1990s; the increase in environment-related trade disputes testifies to this, as does the fact that environmental chapters are increasingly being written into trade agreements. Finally, the third chapter examines the situation regarding infrastructure and logistics, which are key to international trade and production. In conclusion, public policies on economic infrastructure concessions need to be re-examined, considering the crucial role played by the State in regulation, especially in overseeing competition.

Changing the terms of women’s engagement in cocoa and coffee supply chains—Food and Agriculture Organization of the United Nations 2018-05-01 In this report, FAO, Twin, KIT and other case holders take a close look at gender inequalities in the cocoa and coffee sectors, and
their underlying causes. The included case studies are structured around four themes including: women’s participation and leadership in producer organisations, women’s access to land, the household approach and innovations in extension services. The report also explores how to address inequalities systematically and how to bring the solutions to scale.
